

Build Log -Internship & Learning Progress Coach

14 August 2026 - Initial Build

Goal

Build an AI agent that helps manage internship and learning tasks by reviewing current progress, deadlines, priorities, and available time, then recommending one clear next task

Platform

Claude Project

What I Set Up

Created the Internship & Learning Progress Coach Claude Project.

Added project instructions defining the agent's role, workflow, prioritization rules, response format, progress updates, deadline handling, and safety guardrails.

Added internship and learning progress information as project knowledge.

Connected real project files as the agent's data source:

- Internship_Progress.md
- Internship_learning_progress_data.docx

First Test

Tested the agent with:

"What should I work on next? I have about 1 hour available today.

The agent correctly

- Identified the FlyRank Backend Build (Core) Checkpoint 1 as the highest-priority task.
- Considered the available one-hour timeframe.
- Did not invent a deadline.
- Recommended one focused piece of work instead of the entire assignment.
- Asked for missing information about the current build state.

Iteration / Issue Found

During the first test, the agent referred to a current agent build file. Since the agent is being built directly inside the Claude Project rather than in a separate build file, I clarified that the project itself is the current build environment.

After clarification, the agent correctly reviewed the available project instructions and files and identified the remaining checkpoint requirements.

Current Status

- Agent instructions: Completed
- Real file/data connection: Completed
- Core agent behavior tested: Completed
- Build log: Started
- Raw ~2-minute successful run recording: Not yet completed

Next Step

Continue documenting real iterations and changes in this build log. Once the core end-to-end run is working successfully, record one raw, unedited approximately 2-minute screen capture.
