

ASSIGNMENT

Proof Statement

I want my portfolio to prove that I can integrate AI/LLM capabilities into existing products and workflows to solve practical user problems, such as building an AI-powered task prioritization feature for a task management application. This portfolio is designed for software engineering hiring managers who are recruiting entry-level Backend AI Engineers or AI Software Engineers. Through my projects and technical case studies, I want to demonstrate my ability to build practical AI-integrated backend solutions and encourage hiring managers to use the portfolio's contact form to schedule an interview

One-line Why

My CV and LinkedIn describe my education and experience, but they cannot demonstrate how I design, build, and integrate AI into real applications. My portfolio provides that proof through real projects and technical case studies.
