

1. What is a backend?

Backend is the part of a website that works in the background it receives, processes and handles data that the user does not directly see.

2. What does your feature do?

My contact form allows visitors to enter their name, email, and message. When they submit the form, the information is sent to Web3Forms and receive a notification on Gmail as well.

3. How does the data flow?

The data flows like this:

Visitor → Contact Form → Web3Forms → My configured email inbox
